[Customers ask: Oil and natural gas prices are down. Why are CL&P and UI's GSC rates not declining?](#)
 This is a great question! The short answer is because CL&P and UI don't buy the electricity they supply their Standard Service customers in real time. Instead they buy small blocks over time. Click the headline for a complete answer.

Compare Offers - Just Select Your Rate

Use the drop down menu to select your rate. This will open a page that compares GSC rates being offered by electric suppliers and aggregators.

Not sure of your rate? Look on your electric bill or use the links below to view a sample electric bill.

Many customers ask how long will it take to switch. It takes one billing cycle. So the change does not happen immediately.

If you have questions or need help with Choosing an Electric Supplier you can speak to someone at the Department of Public Utility Control's Consumer Outreach Unit at (1-888-922-3782) or TOD at (860-827-2937).

Choose An Electric Supplier

Did you know that nearly **200,000** or about **12.5%** of Connecticut's residential and business customers have chosen an electric supplier?

'GSC' means Generation Service Charge - the rate you pay for the generation portion of your electric bill.

You can compare GSC offers from electric suppliers to lower your bill. To see current offers, select 'Compare GSC Offers' on the left.

CL&P & UI **encourage** their customers to Choose An Electric Supplier because lower costs benefit everyone in Connecticut.

Like shopping for any product or service, you should be informed when it comes to comparing GSC rates and choosing an electric supplier. Click 'Questions to Ask Suppliers' or 'Frequently Asked Questions' on the left to learn more.

Depending on the offer your savings could be substantial. You may be able to lock in a fixed rate, or switch to a variable one. Select a topic from the list on the left to get started.

Make sure your current company is on the top line. Compare prices (and savings!) with companies listed below.
